

as a truck driver I pay and use this service as a tool for my trade. I pay for the privilege of getting information when I need it for as long as I need it. This is a free country where capitalism rules.. We as citizens have a choice how and where we want to spend our money. To hear some complain because someone came up with something better than what they have. Why should we create laws to put down the growth and capitalism of our country. Tell those whining liberals to get a grip and come up with something better if what they have doesn't work and to stop whining to the government to bail their sorry butts out. The bottom line is, I pay for these services. They provide me the information that I need to be an aware and safe driver. The local channel only provides 3-5 minutes of traffic information(if I happen to have that channel on). As a professional driver I need more information to avoid bad traffic or possible dangerous traffic situations. If the local channels can provide more information to target the professional drivers, then they wouldn't lose listeners to XM. My only hope is that more large city jump on to the XM radio to provide information.
